### AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application.

### Listing of Claims:

(Currently amended) A compound of the formula

formula (Ia)

or

formula (Ib)

### in which

the residues V, W, X and Z are in each case, independently of each other, a hydrocarbon residue which can contain heteroatoms and/or V, W and/or X is/are hydrogen, wherein at least one of the residues V, W, X and/or Z earries-a contains a binding group Y and in that the residues V, W, X and Z together exhibit at least two groups of the formula (IIa)

R<sub>1</sub>- (CH<sub>2</sub>-CH<sub>2</sub>-O)<sub>n</sub> - CH<sub>2</sub>-CH<sub>2</sub>-

### formula (IIa)

#### in which

 $R_1$  is  $H_{\underline{\prime}}$  hydroxy or a hydrocarbon residue which has from 1 to [[50]]  $\underline{10}$  carbon atoms and which can contain heteroatoms, and

n is, on each occasion independently, an integer of from 3 to 1000.

- 2. (Currently Amended) The compound of claim 1, wherein the binding group Y is selected from groups which are able to <u>covalently</u> bind to an amino group, a thiol group, a carboxyl group, a guanidine group, a carboxyl group, a heterocycle, a Cnucleophilic group, a C-electrophilic group, a phosphate or a sulfate, or are able to form a chelate or a complex with metals or are able to bond to silicon-containing surfaces.
- (Previously presented) The compound of claim 1, wherein it contains at least three groups of the formula (IIa).
- (Previously presented) The compound of claim 1, wherein at least one of the residues X and/or Z is branched and contains at least two groups of the formula (IIa).
- (Previously presented) The compound of claim 1, wherein at least one of the residues X and/or Z additionally possesses a targeting group.
- 6. (Currently Amended) A compound having the formula (XIV)

$$\begin{array}{c|c} X_4 & O & H \\ & \parallel & \parallel & (CH_2)_g \\ X_3 & A & \\ X_2 & A & \\ X_2 & & \\ X_1 & & \parallel & \parallel \\ X_1 & & O & A \end{array}$$

in which

h and i are, on each occasion independently, 0 or 1,

g and f are, on each occasion independently, an integer between 0 and 10,

A is, on each occasion, H or -(CO)-NX2, and

 $X_1$ ,  $X_2$ ,  $X_3$  and  $X_4$ , and also X, have, in each case independently of each other, the meanings given above for X, where the compound exhibits at least two groups of the formula (IIa)

R<sub>1</sub>- (CH<sub>2</sub>-CH<sub>2</sub>-O)<sub>n</sub> - CH<sub>2</sub>-CH<sub>2</sub>-

## formula (IIa)

in which

 $R_1$  is  $H_{\star}$  hydroxy or a hydrocarbon residue which has from 1 to [[50]] 10 carbon atoms and which can contain 5 heteroatoms, and

n is, on each occasion independently, an integer of from 3 to 1000.

 (Currently Amended) A method for preparing a compound as claimed in claim 1, wherein the compounds of the formulae

Page 5 of 12

$$\begin{array}{llll} X'-NH_2 & & & & & & \\ (W')_2C=O & & & & & \\ Z'-NC & & & & & \\ & & & & \\ & & & & \\ V'-COOH & & & & \\ & & & & \\ & & & & & \\ & & & & & \\ & & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & & & \\ & & \\ & & & \\ & & \\ & & \\ & & & \\ & & \\ & & & \\ & & \\ & & \\ & & & \\ & & \\ & & \\ & & & \\ & &$$

are reacted with each other, as starting compounds, in a multicomponent reaction, where V', W', X' and Z' are, in each case independently of each other, a hydrocarbon residue which can optionally contain heteroatoms and/or V', W' and/or X' are hydrogen, where at least one of the residues V', W', X' and Z' earries contains a binding group Y and where the residues V', W', X' and Z' together possess at least two groups of the formula (IIa)

### formula (IIa)

in which

 $R_1$  is  $H_{\underline{\lambda}}$  hydroxy or a hydrocarbon residue which has from 1 to [[50]]  $\underline{10}$  carbon atoms and which can contain heteroatoms, and

n is, on each occasion independently, an integer of from 3 to 1000.

(Previously presented) The method of claim 7, wherein at least one of the residues V',
 W', X' and/or Z' contains at least one further functionality selected from the group consisting of NH<sub>2</sub>, C=O, NC and/or

COOH.

9. (Previously Presented) A conjugate which comprises a compound of the formula (I), as

defined in claim 1, which is covalently bonded to a biopharmaceutical, pharmaceutical and/or synthetic active compound.

- (Previously Presented) A conjugate which comprises a compound of the formula (I), as
  defined in claim 1, which is covalently bonded to a surface and/or a biocatalyst.
- (Previously Presented) A conjugate which comprises a compound of the formula (I), as
  defined in claim 1, which is covalently bonded to an enzyme.
- 12. (Previously Presented) A conjugate which comprises a compound of the formula (I), as defined in claim 1, which is covalently bonded to medicinal products or adjuvants for administering active compounds.
- (Previously Presented) A pharmaceutical composition which comprises a compound as claimed in claim 1.
- (Previously Presented) A diagnostic composition which comprises a compound as claimed in claim 1.
- 15. (Previously presented) A pharmaceutical for treating cancer or coronary diseases, metabolic diseases, comprising the conjugate as claimed in claim 9.
- 16. (Previously presented) A method for preparing a substance library, wherein at least two different compounds as claimed in claim 1 are prepared using the method as claimed in claim 7 or 8.
- 17. (Previously Presented) A substance library which comprises at least two different compounds of the formula (I), as defined in claim 1.

- 18. (Previously presented) A kit which comprises:
- (a) at least one compound as claimed in claims 1, 2, 3, 4, 5 or 6;
- (b) buffer solutions and, where appropriate;
- standard proteins and/or means for purifying conjugates which have been formed together with the compound from (a).
- (Previously Presented) A pharmaceutical composition comprising the conjugate as claimed in claim 9.
- (Previously Presented) A diagnostic composition comprising the conjugate as claimed in claim 9.
- 21. (New) A compound of the formula

formula (Ia)

in which

the residues V, W, X and Z are in each case, independently of each other, a hydrocarbon residue which can contain heteroatoms and/or V, W and/or X is/are hydrogen, wherein at least one of the residues V, W, X and/or Z contains a binding group Y and in that the residues V, W, X and Z together exhibit at least two groups of the formula (IIa)

R<sub>1</sub>- (CH<sub>2</sub>-CH<sub>2</sub>-O)<sub>n</sub> - CH<sub>2</sub>-CH<sub>2</sub>-

# formula (IIa)

in which

 $R_1$  is H, hydroxy or a hydrocarbon residue which has from 1 to 10 carbon atoms and which can contain heteroatoms, and

n is, on each occasion independently, an integer of from 3 to 1000.
